ABSTRACT

This document is a collection of statistical information describing some of the more important characteristics of individual schools in the Dade County Public School system. A profile sheet is presented for each individual school providing statistics on school, staff, and student characteristics and student achievement information. General information about the school such as address, telephone number, principal's name, grade organization, and the administrative area and the U.S. Congressional District in which school is located is provided. Also included on the profile sheet are school characteristics, staff characteristics, faculty experience/education, student characteristics, instructional microcomputers, average class size, attendance rate, percent per/free reduced lunch, students with limited English proficiency, number of graduates (for high schools), full-time equivalent (FTE) students, and average cost per FTE student. On the reverse side of each school's profile sheet is a summary of student achievement as measured by the Stanford Achievement Test and the State Student Assessment Test. Data are provided on the number of students tested and the media percentile for the Stanford, and the average percent achieving mastery on the State test. (BW)

INTRODUCTION

This document is a collection of statistical information describing some of the more important characteristics of individual schools in the Dade County Public School system. It is intended to provide detailed information about our public schools of interest not only to the professional staff, but to the general public as well.

A profile sheet is presented for each individual school providing statistics on school, staff, and student characteristics on the front and student achievement information on the reverse.

A school is a complex organization, and efforts to characterize schools by the use of quantitative data are never complete. The factors selected for inclusion in the District and School Profiles are those that are considered to be most indicative of the total school environment and of greatest concern to the educational community. Some factors, such as total Full Time Equivalent (FTE) and cost per FTE, are based on a full school year. Other variables, such as student and staff characteristics, describe the schools at a point in time.

The document District and School Profiles has been published since 1979-80 in a loose-leaf format with individual schools receiving only those data sheets pertaining to their schools. This year the document is being published in a bound volume and will be distributed countywide. It is hoped that this format will be useful and easy to read. Any questions or comments regarding data in this document should be directed to Dr. Norbert Aguiar, Coordinator of the Department of Management Analysis or Ms. Sandra Britt, Statistical Analyst, at 350-3447.

SCHOOL, STAFF, AND STUDENT CHARACTERISTICS

The topmost section of the profile sheet provides general information about the school such as address and telephone number, the principal's name, grade organization, and the administrative area and the U.S. Congressional District in which the school is located. Explanatory notes on other sections follow.

School Characteristics: This section describes the overall organization and individual characteristics of the school such as whether or not it is an exceptional student center, a community school, an adult education center, a comprehensive high school, a traditional basic skills, or a Chapter I school. Information is also provided to indicate if the school offers an after-school care program and if it has been designated as a school/park site. The total number of students transported by the school system is also indicated. Included in this section is information on the school plant, such as the number of acres of land at the school site, the assigned program capacity, and percent of utilization of the permanent facility. Assigned program capacity (which is to be distinguished from design capacity) is the capacity of the permanent facility which has been adjusted to reflect seating requirements of individual programs. Percent utilization of the permanent facility has been computed by dividing student membership by assigned program capacity. Preliminary student membership (not the official count as of October 1, 1982) was used for the purpose of this computation.

Staff Characteristics: This section provides statistics on all the full-time staff at the school by ethnic composition and sex. The numbers represent actual staff on board as of October 1, 1982, which exclude open positions as of that date.

Faculty Experience/Education: The general background of teaching staff is provided here which indicates the number of first-year teachers, percent of instructional staff with Masters or higher degree, and average teaching experience in Florida.

Student Characteristics: This section shows the total student membership at the school as of October 1, 1982 by ethnicity and sex in the various grades. The percent of students not promoted from one grade to another in the prior year (1981-82) is also shown.

Instructional Microcomputers: Total number of instructional microcomputers available at the school as of October 1, 1982 is shown in this section. It is to be noted that a number of schools acquired microcomputers subsequent to this date. These are not shown here.

Average Class Size: This section provides data on the average class size by grade level in elementary schools and subject area in secondary schools. Districtwide average for the grade or subject is included for comparative purposes.

Attendance Rate: This section shows the percent of student attendance at the school during the first grading period (August 30, 1982 - November 4, 1982) with the comparable rate for the district.

Percent/Free Reduced Lunch: This section provides information on the percent of student population receiving free or reduced price lunch. These data, which are for the last school year, are frequently used as a socio-economic indicator of the community served by the school.

Students with Limited English Proficiency: Shown here is the percent of students in the school having a limited ability to understand, speak, or read English and having a primary or home language other than English.

Number of Graduates: This section, which applies only to high schools, provides data on the number of students graduating from school and the type of diploma awarded. The data are for the school year 1981-82.

Full-Time Equivalent Students: Data on total full-time equivalent (FTE) students at the school during last year are provided here, including summer school. A breakdown of the FTE by major program components is also provided. One FTE represents 25 pupil/teacher contact hours per week, whether full-time or aggregate part-time.

Average Cost per FTE Student: Shown here is the actual average cost per full-time equivalent student in the three major program components during the 1981-82 fiscal year. The "Educational Alternative" component has been included under the basic program. The cost includes expenditures in the operating budget as well as special revenue funds. While resource allocations are made to all schools on a standard formula basis, actual costs vary from school to school mainly because of varying student membership in the program and seniority of staff.

STUDENT ACHIEVEMENT TESTING

On the reverse side of each school's profile sheet is a summary of student achievement as measured by the Stanford Achievement Test and the Statewide Student Assessment Test. A summary of districtwide test results is on page 6.

Stanford Achievement Test - April 1982

During the spring of 1982, Dade County Public School students in kindergarten through tenth grade were tested using the new Stanford Achievement Test, Seventh Edition, for the first time. This test was reviewed with the assistance of parents, teachers and educators, and selected after review of the other commercially available tests. Dade students in kindergarten through tenth grade were administered the test in April 1982, at the same time that national norms were being established.

Number Tested: Excepting certain exceptional and non-English speaking students, this includes all pupils tested in the 1981-82 school year.

Median Percentile: This is the percentile score point which separates the distribution of scores into a top and a bottom half. The school median percentile may be compared to the national norm (or average) of the 50th percentile for all grades and all subtests.

State Student Assessment Test

In 1976, the Florida legislature passed the Educational Accountability Act, requiring an annual basic skills assessment program. Students in Grades 3, 5, 8, and 10 are assessed in the basic skills areas of reading, writing, and mathematics.

A set of standards in each of the basic skills areas was developed by the State Department of Education to identify the minimal competencies required of students. The standards include such things as computational arithmetic, punctuating correctly, and developing a minimum vocabulary. At the senior high level, the standards are divided into groups called Part I and Part II. Part I standards are the basic skills, focusing on reading, writing, and mathematics. Part II standards deal with the application of the Part I basic skills. For example, the student may be asked to compute the cost, including Florida sales tax, of specific items listed in a newspaper ad.

Mastery of the standards is measured by the State Student Assessment Tests administered each year. If a student fails to master the basic skills standards on Part I of the test, the school may use local procedures to remediate and then certify mastery at a later date. Mastery of Part II standards can be demonstrated only by taking and passing the State Assessment Part II test.

Average Percent Mastery: This is the average of the percentage mastery of the assessed standards in each skill area.

For the Part II test, the percent of grade 10 students passing each section of the test is indicated.
